Task: Develop a simple classification model.

Details:

- Use the Iris dataset to classify data points.

- Train a model using Logistic Regression or Decision Tree.

- Evaluate accuracy.

Sample Code:

```python
from sklearn.datasets import load_iris
from sklearn.model_selection import train_test_split
from sklearn.linear_model import LogisticRegression

iris = load_iris()
X_train, X_test, y_train, y_test = train_test_split(iris.data, iris.target, test_size=0.2)

model = LogisticRegression(max_iter=200)
model.fit(X_train, y_train)
accuracy = model.score(X_test, y_test)
print(f"Accuracy: {accuracy:.2f}")
```
